KODAK EKTACHROME 100 Professional Film

KODAK EKTACHROME 100 Professional Film is a daylight-balanced color reversal film designed to meet the special demands of commercial photographers, especially those whose primary business is catalog photography. The film features very fine grain, very high sharpness, and exceptional color accuracy.

EKTACHROME 100 Professional Film is an excellent choice for photographic applications where natural color rendition is required; i.e., commercial images of furniture, fabric, and clothing—particularly those with reflectance characteristics that often adversely affect color reproduction.

The film is intended for exposure with daylight or electronic flash. You can also expose it with photolamps (3400 K) or tungsten (3200 K) illumination with conversion filters.

The exposure range is 1/10,000 to 1/10 second without the need for filter correction or exposure compensation.

You can use this film to produce color transparencies for viewing with 5000 K illumination. You can also print the transparencies by photomechanical methods or by the photographic methods of direct duplication and direct reversal printing. They can be scanned for graphic-arts reproduction as well.

FEATURES

- Spectral sensitivity designed to optimize color reproduction
- Exceptional shadow detail and color saturation
- Excellent flesh-to-neutral color balance
- Very high sharpness

BENEFITS

- The most accurate film for color reproduction, most obvious with teal, green, and blue hues
- Rich colors without compromising color accuracy
- Accurately records neutral colors while maintaining pleasing flesh tones
- Able to provide images with excellent detail

SIZES AVAILABLE

Sizes and catalog numbers differ from country to country. For a complete list of sizes, contact a dealer who supplies KODAK PROFESSIONAL Products.

KODAK PROFESSIONAL READYLOAD Single-Sheet Packet

| 20"    | 4 x 5         | EPN       | 7-mil (0.18 mm) ESTAR Thick | 114 2017 |

*For use with the KODAK READYLOAD Packet Film Holder or other holders such as the POLAROID Model 545/545i and FUJIFILM QUICKLOAD Film Holders.
STORAGE AND HANDLING

Load and unload film in subdued light.

Store unexposed film at 13°C (55°F) or lower, in the original sealed package. To avoid moisture condensation on film that has been refrigerated, allow the film to warm up to room temperature before opening the package. Process film as soon as possible after exposure.

Protect processed film from strong light, and store them in a cool dry place. For more information on storing transparencies, see KODAK Publication No. E-30, Storage and Care of KODAK Photographic Materials—Before and After Processing.

DARKROOM RECOMMENDATIONS

Do not use a safelight. Handle unprocessed film in total darkness.

EXPOSURE

Exposure Index Numbers

Use the exposure index (EI) numbers below with light meters or cameras marked for ISO or ASA speeds or exposure indexes. Do not change the film-speed setting when metering through a filter. Metering through filters may affect light meter accuracy; see your meter or camera manual for specific information. For critical work, make a series of test exposures.

<td>1/125</td>
<td>f/16*</td>
</tr>
<tr>
<td>Weak, hazy sun, soft shadows</td>
<td>1/125</td>
<td>f/11</td>
</tr>
<tr>
<td>Cloudy bright, no shadows</td>
<td>1/125</td>
<td>f/8</td>
</tr>
<tr>
<td>Heavy overcast, open shade*</td>
<td>1/125</td>
<td>f/5.6</td>
</tr>
</tbody>
</table>

* Use f/8 for back-lit close-up subjects.

† Subject shaded from the sun but lit by a large area of clear sky.

Electronic Flash

Use the appropriate guide number in the table below as a starting point for your equipment. First select the unit output closest to the number given by your flash manufacturer. Then find the guide number for feet or metres. To determine the lens opening, divide the guide number by the flash-to-subject distance. If transparencies are consistently too thin (overexposed), use a higher guide number; if they are too dense (underexposed), use a lower number.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

BCPS = beam candlepower seconds.

Multiple Exposures with Electronic Flash

No filter corrections or exposure adjustments are required for 1 or 2 flashes (multipops). For additional multipops, see the adjustments in the table below.

Fluorescent and High-Intensity Discharge Lamps

Use the color-compensating filters and exposure adjustments below as starting points to expose this film under fluorescent or high-intensity discharge lamps. For critical applications, make a series of test exposures under your actual conditions.

To avoid the brightness and color variations that occur during a single alternating-current cycle, use exposure times of 1/60 second or longer with fluorescent lamps; with high-intensity discharge lamps, use exposure times of 1/125 second or longer.

Adjustments for Long and Short Exposures

No filter correction or exposure adjustment is required for exposures from 1/10,000 to 1/10 second. At 1 second, use a CC05M filter and increase exposure by 1/3 stop. We do not recommend exposure times longer than 1 second. At longer exposures, significant color balance shifts in the cyan-green direction or contrast mismatch may occur.

Note: This information applies only when the film is exposed to daylight. The data are based on average emulsions rounded to the nearest 1/3 stop and assume normal recommended processing. Use the data only as a guide. For critical applications, make tests under your conditions.

### PROCESSING

Process KODAK EKTACHROME 100 Professional Film in KODAK Chemicals, Process E-6.

For consistent processing of this and other KODAK EKTACHROME Films, use a lab that is a member of the KODAK Q-LAB Process Monitoring Service.

### RETOUCHING

Use KODAK E-6 Transparency Retouching Dyes. You can chemically retouch sheet and 120/220 formats of EKTACHROME 100 Professional Film on both the base and the emulsion side. Retouch only the emulsion side of the 135 size.

For information on retouching equipment, supplies, and techniques, see KODAK Publication No. E-68, *Retouching Color Transparencies on KODAK EKTACHROME Film.*
**PRINTING TRANSPARENCIES**

You can reproduce images made on KODAK EKTACHROME 100 Professional Film by using a variety of Kodak materials.

**Duplicate Color Transparencies**

For direct printing, use—

- KODAK EKTACHROME Duplicating Films
- KODAK EKTACHROME RADIANCE III Overhead Material (for overhead transparencies)
- Or make internegatives on KODAK Commercial Internegative Film, and print them on—
  - KODAK VERICOLOR Print Film
  - KODAK VERICOLOR Slide Film
  - KODAK PROFESSIONAL DURATRANS Display Material
  - KODAK PROFESSIONAL DURACLEAR Display Material

**Color Prints**

For direct printing, use—

- KODAK EKTACHROME RADIANCE III Papers
- KODAK EKTACHROME RADIANCE III SELECT Material
- Or make internegatives on KODAK Commercial Internegative Film, and print them on—
  - KODAK PROFESSIONAL PORTRA III Papers
  - KODAK PROFESSIONAL SUPRA III Papers
  - KODAK PROFESSIONAL ULTRA III Paper
  - KODAK PROFESSIONAL DURAFLEX Print Material

**Digital Files**

You can scan your image to a file and print digitally to—

- KODAK PROFESSIONAL Digital III Color Paper
- KODAK PROFESSIONAL DURATRANS Digital Display Material
- KODAK PROFESSIONAL DURACLEAR Digital Display Material
- KODAK PROFESSIONAL DURAFLEX Digital Print Material

---

**SCANNING TRANSPARENCIES**

**For Graphic Arts Applications**

The KODAK EKTACHROME Film family is characterized by sets of image dyes which perform similarly when scanned. The scanner operator can set up one basic tone scale and color-correction channel for all EKTACHROME Films and then optimize the tone scale and gray balance for the requirements of individual images.

Use the KODAK Color Input Target / Q-60E1 (4 x 5-inch transparency) or Q-60E3A (35 mm slide) to establish the setup for KODAK EKTACHROME Films on all scanners. This target meets ANSI standards and represents the dye sets of all EKTACHROME Films.

**Scanning for Photo CD Applications**

For Output to a Photo CD Player: Using the Universal E-6 Film Term should result in an image that closely matches your original transparency in density, tone scale, and overall color balance when viewed on a player. Use the Universal E-6 Film Term to scan all KODAK EKTACHROME films for Photo CD Imaging Workstation applications.

For Output to Devices Other than Photo CD Players: The YCC data that results when using the Universal E-6 Film Term is capable of producing a high-quality duplicate of your original in terms of density, tone scale, and color reproduction. Final quality of your reproduced image depends on the capabilities of your output device, the viewing environment, and the rendering path that is used.
**CURVES**

**Diffuse rms Granularity** 11 (very fine)

*Read on a gross diffuse visual density of 1.0, using a 48-micrometre aperture, 12X magnification.

**Characteristic Curves**

![Characteristic Curves Diagram](image)

**Spectral-Dye-Density Curves**

Normalized dyes to form a visual neutral density of 1.0 for a viewing illuminant of 5000 K.

*Process: E-6*
